2. Citations and explanations (Rule 70.7)

D1 (US5124955 A) relates to sonar type underwater communication systems using digital codes.

D2 (US5432754 A relates to a receiver for receiving a plurality of asynchronously transmitted signals.

D3 (US5784339 A) relates to an underwater location and communication system using the simultaneous transmission of a plurality of acoustic signals at different frequencies and at selected intervals for relative position determination and communication between units.

D4 (US5301167 A) relates to a system for optimizing digital communications through the utilization of both phase coherent modulation and demodulation along with specialized coding and decoding techniques involving combined equalization , phase estimation and symbol synchronization .

D5 (US5029147 A) contemplates a unique telemetry system comprising digital and analog channels and using crosscorrelation detection and self-correction for doppler.

Every element or step is not explicitly or inherently disclosed within the prior art and the invention as a whole, compared to the prior art as a whole, would not have been obvious to a person skilled in the art.

In the light of the documents cited in the international search report, it is considered that the invention as defined in the claims meets the criteria mentioned in Article 33(1)PCT, i.e. it appears to be novel, to involve an inventive step and to be industrially applicable.
